

Name _____ Date _____ Period _____

Animal cells and Plant cells use many of the same organelles (cell parts), but some of them are different. The animal cell contains centrioles and lysosomes, while the plant cell contains the cell wall and chloroplasts. These organelles have jobs (or functions) that are unique to its cell.

Directions: Use your textbook to search for the functions of these cell parts. In your own words, explain how they are used in their cell. Each explanation should be 3-5 sentences.

Animal Cell

Centrioles: _____

Lysosomes: _____

Plant Cell

Chloroplast: _____

Cell Wall: _____
